### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William D. Davis, Reg. No. 38,428, on 30 September 2006.

The application has been amended as follows:

4. (Currently Amended) A subscriber loop linefeed driver comprising:

sense circuitry providing a sensed tip signal and a sensed ring signal to sense inputs of an integrated circuit; and

power circuitry for providing battery feed to a ring node and a tip node of the subscriber loop in accordance with a control signal, the integrated circuit processing the sensed tip and ring signals to generate the control signal, wherein the power circuitry does not reside within the integrated circuit.

13. (Currently Amended) An apparatus comprising:

an integrated circuit processing a sensed tip signal and a sensed ring signal of a subscriber loop to generate subscriber loop control signals, the sensed tip and ring signals received by sense inputs of the integrated circuit; and

a linefeed driver for driving a subscriber loop in accordance with the subscriber loop control signals, the linefeed driver providing the sensed tip and ring signals.

***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

**1. Claims 1-23 are allowed.**

**Independent claims 1, 4 and 13** have all been amended to recite that "the integrated circuit processes the sensed signals to generate a control signal" and that the integrated circuit has "sense inputs" for each of the "tip signal" and "ring signal." As noted in applicant's instant reply, page 10, in an interview on 9 March 2006, the examiner indicated that claim language specifying that the integrated circuit processes the sensed signals to generate a control signal differentiates the claimed invention from the cited prior art. In particular, Zhou '417, which is used as a base reference in all rejections, performs processing on sensed signal in an integrated circuit, however, that integrated circuit does not also receive the sensed signals at different inputs, but rather one input TD1. Thus, these claims are allowable over the cited prior art.

**Claims 2, 3, 5-12 and 14-23** depend variously on claims 1, 4 and 13; and thus, are allowable over the cited prior art for at least the same reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
